

Some recent results about compactness of a class of pseudodifferential operators

Rodolfo H. Torres

University of California, Riverside

We will present some recent results about the compactness of a class of pseudodifferential operators. The techniques used rely on the compact version of the T1-Theorem, extrapolation, symbolic calculus, and functional analytic properties of certain subspaces of BMO.

In Special Session 1 on Applied Harmonic Analysis and Operator Theory at the Mathematical Congress of the Americas 2025.
