

Parametrized Jacobian Conjecture

Álvaro Castañeda

Universidad de Chile

We present numerous definitions of injectivity for a parametrized family of maps and analyze its connection to a recently proposed global nonuniform stability conjecture for nonautonomous differential systems. In line with the Jacobian Conjecture, this relationship lets us look at a certain group of parametrized polynomial automorphisms and show that they have polynomial inverses for certain parameters.

In Special Session 8 on Global Injectivity, Jacobian Conjecture and Related Topics at the Mathematical Congress of the Americas 2025.
