

# An Obstruction for Standard Invariants of TLJ Type

Emily McGovern

University of Oregon

In this talk, we will present a set associated to a given discrete subfactor standard invariant. When the standard invariant is of TLJ-type, it corresponds to a fair and balanced delta-graph. The main content of the talk will be a construction on fair and balanced delta-graphs that allows us to compute this our distinguished set graph theoretically for TLJ-type standard invariants.

In Special Session 9 on Hopf Algebras and Tensor Categories at the Mathematical Congress of the Americas 2025.
