

On coarse geometry of separable dual Banach spaces

Bunyamin Sari

University of North Texas

We will speak on the open problem whether a separable dual Banach space can be coarsely universal, that is, if c_0 coarsely embeds into such a space. We will present some of our and others work towards this, and highlight what we think of the crucial case of the (generalized) James tree spaces. Joint work with Steve Jackson, and Cory Krause.

In Special Session 10 on Nonlinear Analysis on Banach Spaces at the Mathematical Congress of the Americas 2025.
