

## Periodicity on time scales and applications

Jaqueline Mesquita

University of Campinas

In this talk, we will present a more general concept of periodicity, which is suitable for any time scales. In this concept, there is no need to restrict to time scales that have the additive property. We also present some applications which follow from this concept. This is a joint work with Martin Bohner and Sabrina Streipert.

In Special Session 19 on Nonlinear Evolution Equations: Trends in Control Theory and Related Topics at the Mathematical Congress of the Americas 2025.
