

$Sp(2)$ -instantons with symmetry

Izar Alonso

Rutgers Univeristy

$Sp(2)$ -instantons are distinguished connections on eight-manifolds, analogues to anti-self-dual connections on four dimensions. In this talk, we discuss $Sp(2)$ -instantons with symmetry on T^*CP^2 with its hyperkähler Calabi structure.

In Special Session 23 on Special Geometries and Gauge Theory at the Mathematical Congress of the Americas 2025.
