

Photon divisors

Marina Logares

Universidad Complutense de Madrid

A photon is represented mathematically by a solution to the massless field equations in spacetime, which correspond to the Maxwell equations in the absence of charges and sources. The Penrose transform allows us to view these solutions as certain divisors. The goal of this talk is to explore the connection between physics and algebraic geometry through this perspective. This is based on ongoing work with S. Huggett.

In Special Session 32 on Vector Bundles on Varieties and Quantization at the Mathematical Congress of the Americas 2025.
