

## Towards relative frequencies of curves with self intersections in large genus

Marie Trin

Max Planck Institute, Leipzig

After a review of the results of Mirzakhani and Delecroix-Goujard-Zograf-Zorich on the study of relative frequencies of simple closed curves on surfaces we will present the first results we obtained for curves with self intersections. This is based on an ongoing project together with Liu, Rafi and Souto.

In Special Session 34 on Randomness in Low-Dimensional Geometry at the Mathematical Congress of the Americas 2025.
