

## The global in time existence of some 2D systems with vertical dissipation

Chongsheng Cao

Florida International University, USA

In this talk we study the 2D anisotropic Boussinesq equations, as well as the 2D anisotropic Navier-Stokes equations with vertical dissipation. we establish the global in time existence of classical solutions to these equations in variant domains.

In Special Session 36 on New Developments in Mathematical Fluid Dynamics at the Mathematical Congress of the Americas 2025.
