

Some results on the dynamics of criminal vs non-criminal population with time-delay.

John A. Arredondo

Fundación Universitaria Konrad Lorenz

It is interesting to note that, despite the large amount of work devoted to studying the dynamics between non-criminal and criminal populations via epidemiologic models, up to our knowledge, this is the first work where a well-developed line of research on delayed time differential equations is used for these models.

In Special Session 37 on Delay and Functional Differential Equations and Applications at the Mathematical Congress of the Americas 2025.
