

Maximal Integral Positions for Log-Concave Functions

Grigory Ivanov

Pontifical Catholic University of Rio de Janeiro

We will discuss necessary and sufficient conditions for the maximal integral position of one log-concave function with respect to another, along with their corollaries. Our focus will be on the geometric interpretation of these results and the differences compared to their classical counterparts.[abstract here](#).

In Special Session 39 on Interplay between Asymptotic Geometric Analysis, Discrete Geometry, and Combinatorics at the Mathematical Congress of the Americas 2025.
