

Nonempty interior of the pinned distance set

Eyvindur Palsson

Virginia Tech

In this talk I will show the first non-trivial threshold for a variant of the celebrated Falconer distance problem, that establishes non-empty interior of the pinned distance set in the plane. This is joint work with Tainara Borges, Benjamin Foster and Yumeng Ou.

In Special Session 43 on Harmonic Analysis and Partial Differential Equations at the Mathematical Congress of the Americas 2025.
