

A new class of FBI transform

Gustavo Hoepfner

Federal University of São Carlos - Brazil

We introduce a class of FBI transforms using weight functions (which includes the subclass of Sjostrand's FBI transforms used by M. Christ in 1997 as examples) and show that it is well suited when dealing with ultra-differentiable functions. Applications will be given. Joint work with Renan Medrado, UFAL.

In Special Session 44 on Recent Advances in Harmonic Analysis, Partial Differential Equations, and Geometric Measure Theory at the Mathematical Congress of the Americas 2025.
