

Session 44 - Around the divergence equation: singularities and solvability with measure data

Laurent Moonens

Université Paris-Saclay - France

In this talk, we will discuss (weighted) L_p removability results for the divergence equation, in Euclidean spaces and in bounded domains, and explain how their geometric characterizations can be obtained using solvability results for the divergence equation with measure data.

In Special Session 44 on Recent Advances in Harmonic Analysis, Partial Differential Equations, and Geometric Measure Theory at the Mathematical Congress of the Americas 2025.
