

Homogenization of a "vertical" oscillating Neumann condition

William Feldman

The University of Utah

I will discuss a boundary data homogenization problem for the heat equation arising in the study of interface motions and pinning. We derive a homogenization limit to a heat equation with a new type of singularly anisotropic Neumann condition. This is based on joint work with Zhonggan Huang (PhD Student, University of Utah).

In Special Session 48 on Free Boundary Problems and Nonlinear PDEs at the Mathematical Congress of the Americas 2025.
