

56 - Pulling back Cartier modules along regular maps

Javier Carvajal-Rojas

CIMAT-Guanajuato

I will present a formalism to pullback Cartier modules and their invariants along regular morphisms. As an application, I will show a generalization of a result of Felipe Pérez regarding the discreteness of F-jumping numbers of mixed test modules and that their constancy regions are p-fractals.

In Special Session 56 on Recent Developments in Commutative Algebra at the Mathematical Congress of the Americas 2025.
