

Analysis and simulation of cholesteric and twist bend nematic liquid crystals.

Tiziana Giorgi

The University of Alabama

We will present our recent work on the mathematical analysis and numerical simulation of free energy functionals modeling cholesteric and twist bend nematic liquid crystals . This is joint work with Carlos García-Cervera and Sookyung Joo.

In Special Session 65 on Variational Problems of Physical Origin at the Mathematical Congress of the Americas 2025.
